

DAVID LIU & ASSOCIATES

PROFESSIONAL ENGINEERS & CONSULTANTS

Re: Structural Engineering Service

Honorable Governor:

It is shocking to me that there is no licensed structural engineer seated on the Nevada State Board of Professional Engineers and Land Surveyors, Consumer Affairs Office (Board).

Structural engineering is the most important branch in civil engineering. Like architecture represents the beauty of an object, structural engineering determines the strength of the object. Structural engineering work is important to the consumer and public safety. Extra training, more experience and specialized examinations are required to become a licensed structural engineer in most states, including the state of Nevada. It is a step up from civil (professional) engineering license.

The current state Board comprises numerous civil and Land Surveyor licensed individuals. It is crucial in all fairness to consumers and the public it should include licensed structural engineers in the board.

Mr. Campbell is strongly recommended by many professional colleagues. As the immediate past president of the Southern Nevada Structural Engineers Association, and with many years of experience serving Southern Nevada, Mr. Daniel Campbell is a licensed structural engineer, and is the best person qualified to serve on the state Board.

As a conservative family man, an administrator and with many years of professional practice, Mr. Campbell has outstanding characteristics and impeccable records. And, he is the strong supporter of individual responsibility, and shares same traditional values. Consumers and structural engineering interests will be properly represented by Daniel Campbell serving in the state Board.

Sincerely
